Everton S. Andrade

Software Engineer in Test · QA Automation · AI/LLM Test Tooling

everton_st@outlook.com · github.com/EvertonSt · linkedin.com/in/everton-s-andrade · Paripiranga, Bahia, Brazil · UTC" 3

SUMMARY

I like finding out why software fails and then building the thing that makes the next occurrence cheap to catch.

The through-line in everything above is a preference for deterministic verdicts. Models are genuinely useful inside a test or triage system, and genuinely dangerous as the thing that decides whether a build passes. I have used them in both positions and the difference in reliability is not subtle.

I am based in Paripiranga, Bahia, on UTC" 3, fluent in English, and comfortable working with teams in the US and Europe. I am looking for a remote QA automation or SDET role where the test infrastructure is treated as a product rather than a chore.

EXPERIENCE

Independent QA Automation Engineer and Tooling Developer — Self-employed August 2020 – Present · Brazil

- Designed and shipped Argus, an autonomous QA agent with a 325-test suite that generates Playwright tests, triages failures and files deduplicated issues.
- Built and published Cerberus CI to npm and the GitHub Marketplace: a CI quality gate with 237 tests and 88% line coverage, running provider-agnostic across four model providers.
- Built Enlace, an ISP operations platform spanning a Fastify service, React portal, Tauri console and Expo app, deployed on Railway and Vercel.
- Built SiteCheckIn and AItendimento, two commercial products - one in final pre-launch, one complete and on hold - covering scheduled browser monitoring, billing, WhatsApp automation and the compliance work that goes with both.

Software Development Intern — Ages June 2019 – June 2020 · Paripiranga, Bahia

- University internship on a C# and .NET desktop ERP built by a six-person team in a three-layer architecture (business logic, data access, GUI and model) on SQL Server.
- Owned business-logic and data-access work, database integration, and version control alongside the rest of the team. Worked in Java during the internship.

PROJECTS

SiteCheckIn (Launching January 2027)
Site monitoring platform with AI-generated tests

AItendimento (Launch on hold)
Multi-tenant WhatsApp automation

Argus (Demo data)
Autonomous QA agent with a deterministic verdict
https://github.com/EvertonSt/argus
https://argus-dashboard-jade.vercel.app/

Cerberus CI (In production)
CI quality gate that blocks flakes from a real regression
https://github.com/EvertonSt/cerberus-ci
https://www.npmjs.com/package/cerberus-ci
https://everton-cerberus-site.vercel.app/

Enlace (Demo data)
Operations platform for an internet service provider
https://github.com/EvertonSt/enlace
https://enlace-desktop-b9dq.vercel.app/dashboard

TECHNICAL SKILLS

Testing and quality: Playwright, Cypress, API testing, Deterministic test generation, Failure triage, Duplicate-defect detection, Accessibility testing, Regression budgets

Languages: TypeScript, JavaScript, Python, SQL, C#, Java

Models and evaluation: LLM evaluation, Model routing, Prompt design, Structured output, Guardrails, Offline inference

Full-stack: React, Next.js, Fastify,

Express, WebSockets, Tauri, Expo, REST APIs

Infrastructure: GitHub Actions, CI/CD pipelines, Docker, Vercel, Railway, PostgreSQL, SQLite, npm publishing
